

SHORT GUIDE

BEFORE THE PROVISION DATE

1 Check the deployment date.
Insert your Speedport Pro before 8 a.m. on the deployment day.

 You will find **the provision date in the** order confirmation. Connect Speedport Pro and telephones before 8 a.m. on the provisioning day. We will then automatically check the function and quality of your connection. Please be available by phone on the day of deployment.

2 Insert the MicroSIM.

Remove the SIM card holder
and break out the MicroSIM.

Insert the MicroSIM into the
slot provided. Pay attention
to the alignment of the
beveled corner and the
audible click.

6 Wire the Speedport Pro and your telephones.

After cabling, the Speedport Pro is updated. You will see a running light on the front panel. Wait until the running light is finished.

AFTER THE PROVISION DATE

We check your Speedport Pro and activate the connection.

1 Check whether your Speedport Pro is connected to the Internet.

After activation: An indicator lights up **green**. The connection is now enabled.

If the displays do not light up as described, restart the Speedport Pro. For more information, see "If something does not work" on the back.

2 Check the LTE reception.

Position your Speedport Pro as centrally as possible, high and unobstructed. Press the  button for three seconds. If fewer than two of the LEDs light up blue, take your Speedport Pro to different rooms in your home and check the LTE display again. Use the full length of the DSL cable. We recommend using a power extension.

3 Connect the Speedport Pro to your smartphone, tablet, or computer.

You will find the **WLAN name and password or key** in the lid compartment of the Speedport Pro.

Alternatively, you can also connect your computer to your Speedport Pro **via cable** (yellow connectors).

✓ Done! Have fun with your Telekom product!

You can adjust your personal settings, e.g. for WLAN, at any time at www.telekom.de/einrichten.

WHAT ELSE IS IMPORTANT

Connect other phones

Connecting ISDN devices

You can connect an ISDN device directly to the Speedport Pro:

1. Connect your ISDN telephone or ISDN telephone system to the "Internal ISDN" jack.
2. To ensure that everything works correctly, open the router menu in the browser via <http://speedport.ip> and enter your area code under "Telephony > Internal ISDN".
3. Close the router menu.

Speedport Pro
system

ISDN telephone/telephone

Connect Speedphone

Speedphones are connected to the Speedport Pro via radio. You recognize Speedphones on the "Speedphone" label on the handset of your telephone or on the charging station.

1. When a new Speedphone is switched on, the display will prompt you to register the handset with the base station. Tap on "Register".

For a Speedphone that was already registered, select "Settings > Settings router > Registration" in the Speedphone menu.

2. Then press the  button on the Speedport Pro.

When something does not work

Perform one or more of the following steps:

1. Check luminous indicators

For information on the light indicators, refer to the Router Passport, which is plugged into the lid compartment.

2. Restart Speedport Pro

Press the  button on the back of your Speedport Pro.

3. Use instruction manual

You will find the operating instructions in your router packaging or digitally in the router menu at <http://speedport.ip> under the menu item "Manual" (you do not have to be online for this).

Use SprachBox via app

Get your SprachBox messages sent to your smartphone now. You can easily listen to new messages and make settings from under-way with the app.

For Android: www.telekom.de/voicemail

For iOS: www.telekom.de/sprachbox-pro

4. Improve the WLAN of the Speedport Pro

If your WLAN is slow or unstable, you can find useful tips here: www.telekom.de/wlan-hilfe

Would you like support?

Our experts will be happy to help you. Book the Personal Installation at www.telekom.de/persoennliche-installation or call our toll-free hotline 0800 33 01000.

Tips and info

Do you want to further increase your password security?

Then assign personal and secure passwords, especially for the device password of the Speedport Pro, for Internet access and for WLAN, in order to be even better protected. You will find information on this in the operating instructions for your Speedport Pro.

Data transmission information

At www.breitbandmessung.de you can measure the data transfer rate at your port immediately after setup.
